

Ground source energy for local authorities

GROUND SOURCE ENERGY OFFERS LOCAL AUTHORITIES PEACE OF MIND, USING PROVEN TECHNOLOGY TO INVEST IN THE FUTURE.

The Government hopes to reduce carbon emissions by 60% by 2050 and has said that still more renewable energy will be needed beyond that date. Naturally, local authorities are being looked upon as a tool for change.

To many, this may seem to be a problem. But it may well be an immediate opportunity that can create significant benefits for forward-thinking authorities.

Taking a proactive view of the move towards renewable energies will allow local authorities to reduce their CO₂ emissions significantly, to cut their energy costs, comply with government objectives and be seen publicly to provide strong local leadership on a global problem. And thanks to our unique [GreenLend](#) financing tool, produced in co-operation with our banking partners, we can make it happen without the need for initial capital outlay.

Ground source energy offers local authorities a combination of advantages that are hard to beat. It is based upon proven technologies and with energy prices rising constantly, it's highly affordable and offers a measurable return on investment – whether you are working on a new build or improving an existing structure. As an added benefit, the system is designed and installed without incurring professional fees.

Ground source energy is quiet and clean. Once it's installed and working, there is no visual effect on the environment and a GSHP system takes up no extra space. With the public becoming increasingly discerning, and some taking an ethical stance, GSHP's low aesthetic impact scores heavily.

Our partnership with award-winning professional engineers Rolton Group gives us a major strategic advantage. Making use of professional skills is at the very core of Cool Planet's service; we know that no single project is the same, so by delivering high quality, bespoke solutions, Cool Planet give you value for money as well as a professional service. As a result authorities can benefit from a variety of options and impartial advice, backed up by hard data on performance and cost.

Cool Planet provide a unique end-to-end solution that is backed up by a warranty and professional indemnity insurance to give clients peace of mind and enhance a project's value for money. Working with a single, expert point of contact and in full possession of all the facts about benefits and costs allows you to make an informed decision, confident in the knowledge that you can understand all the issues.

The drive for renewables may well be a problem – but tackled properly it can be a real opportunity to demonstrate local leadership on a global issue, to improve local quality of life.

To find out more about this unique opportunity, call Cool Planet today.
