

Ground source energy for landlords

GROUND SOURCE ENERGY GIVES LANDLORDS THE OPPORTUNITY TO IMPROVE THEIR PORTFOLIO AND GIVE TENANTS WHAT THEY WANT.

Regardless of whether or not Government pressure was driving the property market to an increased take up of renewable energy, it's clear that moving towards renewables makes sound commercial sense. Tenants are increasingly demanding properties that align with their own Socially responsible agendas.

By switching to increased use of renewable energy landlords can revitalise properties, increase revenue and meet tenants' expectations. The time when green buildings were owner occupied has given way to increased adoption by businesses and institutions.

Ground source energy offers a combination of advantages that are hard to beat. It is based upon proven technologies and with energy prices rising constantly, it's highly affordable and offers a measurable return on investment – whether you are working on a new build or improving an existing structure. As an added benefit, the system is designed and installed without incurring professional fees.

Ground source energy is silent and clean. Once it's installed and working, there is no visual effect on the environment and a GSHP system takes up no extra space. With the public become increasingly discerning, and some taking an ethical stance, GSHP's low aesthetic impact scores heavily.

Our partnership with award-winning professional engineers Rolton Group gives us a major strategic advantage. Making use of professional skills is at the very core of Cool Planets service; we know that no single project is the same, so by delivering high quality, bespoke solutions, Cool Planet give you value for money as well as a professional service. As a result you can benefit from a variety of options and impartial advice, backed up by hard data on performance and cost.

Cool Planet provide a unique end-to-end solution that is backed up by a warranty and professional indemnity insurance to give clients peace of mind and enhance a project's value for money. Working with a single, expert point of contact and in full possession of all the facts about benefits and costs allows you to make an informed decision, confident in the knowledge that you can understand all the issues.

Now thanks to our unique  GreenLend financing tool, produced in co-operation with our banking partners, we can make renewable energy happen without the need for costly upfront investment and the need to impact on profits. What's more as Cool Planet is an accredited installer for the low carbon buildings programme, you can benefit from grant assistance.

To find out more about renewable energy and this unique opportunity, call Cool Planet today.
